

I am a OTR Truckdriver and XM Radio has become a an essential tool in my work. First off, The weather channel keeps me up to date on weather in the areas I am traveling. This has allowed me to be a safer driver by avoiding storms whenever possible. XM Traffic channels have also help me be a safer driver by informing of danger on the highways in many of the towns and cities I travel. But the number one reason I feel my XM is important is, it entertains and keeps the mind alert on long hauls with it's large variety of programing and uninterrupted signal. I will also have to say that it is not fair to me as an american to have something I willfully pay for (a service) be governed or controlled by NAB.
